

## Protecting Your Data is as Easy as Backup, Search & Restore

### Automated backup of Office 365 data with SafeHaven® storage:

- Backup Exchange Online, OneDrive, SharePoint, Teams, and all files, folders, and document libraries
- SafeHaven Vault® with zero possibility of accidental deletion
- Encrypted, redundant Amazon S3 storage

### Specific and mass restores of data into Office 365 application and local downloads:

- Select Office 365 data to restore or download
- Specific date, time, and version restores
- Unlimited retention
- Cross-user restore and Office 365 user account migration and exportation

### Instant full-text SmartSearch and advanced features:

- Instant full-text search of Office 365 emails, contacts and calendar
- Search across historical snapshots and version history
- Rich document search filtering, including title, owner, created date, modified date, and folder
- Rich email search filtering, including sent date, received date, label, sender, recipients, subject line, keyword, attachment names, and within attachments

## You standardized on Office 365, so your data is safe in the cloud. Or is it?

More than 30% of small businesses have migrated on-premise Microsoft Exchange servers to Office 365 in the cloud, and the trend is accelerating. However, there are two things most small businesses don't know about Office 365:

1. Microsoft provides no guarantee against data loss and
2. Microsoft only retains data for 14 days after deletion.

Per Microsoft one of the most common security support requests is for assistance remediating account compromise. Microsoft also offers only limited retention. This policy can violate compliance requirements in certain industries, and also affect companies when employees accidentally or deliberately delete files – for example upon termination. We give you peace of mind knowing your organization's data is available for as long as you need it.

# Data Loss Happens. Even In The Cloud.

Can your organization afford to lose important emails, contacts, calendars, and more?

Our solution ensures all your Office 365 data is securely backed up, recoverable, and protected.

# Avert Common Data Disasters

## Ransomware

Ransomware is an unfortunate reality for many organizations. If your Office 365 Data is ever encrypted, our solution allows you to restore pre-infected data to a new domain, having you up and running in just minutes.

## Data Loss

Whether intentional or unintentional, deletion of data is a common threat to your organization's critical Office 365 data. Our SmartSearch function allows you to search for historical data and restore — just two steps!

## Buried Data

Often times we need to find data associated to a particular person or event that spans over a long time period and across all Office 365 channels. With SmartSearch, your organization can perform complex search queries to identify and retrieve data.

## Prevent Data Disasters

User error, flawed data migrations, and more can wreak havoc on your Office 365 information. Our solution guarantees anytime access to critical Office 365 data.

## Never Experience Downtime

Cloud-to-cloud backup for Office 365 makes it easy to find your critical emails, contacts and calendar data. Cloud data can be rapidly restored to any application or user.

## Your Privacy Matters

We take the security of your data as seriously as you do. Our solution features military-grade encryption: 128-bit SSL in transit and 256-bit AES at rest.

## Keep Tabs on Your Data

We provide a comprehensive overview of backups, including a dashboard for seamless navigation of your organizations data.
